

How Big Can Trees Grow?

Hyperion
379 feet (116m)

Big Ben
315 feet (96m)

Árbol del Tule
118 feet (36m) wide

ART'S NOTES

Trees grow in all shapes and sizes!

The tallest tree in the world is the Hyperion. This coast redwood in California is even taller than the Statue of Liberty.

The widest tree in the world is Árbol del Tule, a Montezuma cypress tree in Mexico. The distance around the tree is 119 feet or 36 meters. That is three school buses long!
